

Policy for the future:

We work to build a society in harmony with nature at the areas ‘mountains ~ rivers (plants) ~ ocean’ aiming to conserve water used in our manufacturing processes with a slogan ‘Connect with biodiversity programs by water-source of all life on earth’.

Long term target: Minimizing impact on biodiversity toward the 2050 goals

< Our actions >

- Mountains :** Creating plenty/good quality of water from flourishing forest
- We have been building Toyota Gosei’s forest ‘Kimori no Sato’ (since 2019)
- Rivers :** Protecting local aquatic animals
- We have got rid of invasive species (since 2016)
 - Raising/growing animals and plants, which are at a high risk of becoming extinct
 - We have been building biotopes (since 2016)
 - We have conducted afforestation (since 2009)
- Oceans :** Raising/growing animals and plants in the ocean with clear water
- We have protected tidal flats (since 2016)

* Our achievement to date

We have planted about 300,000 trees at 28 locations worldwide

< Our challenges >

- ① Minimizing impact on biodiversity
We will identify quantitative assessment methods (Meanwhile, we will assess green spaces)
- ② Creating a Regional Circular and Ecological Sphere at the areas ‘mountains ~ rivers ~ ocean’
We will;
 - increase the use of renewable energy
 - utilize unused agricultural lands etc.

< A message to our society >

Leave a greener world for the future and our children !
