

Policy for the future:

Key policy: To achieve disaster prevention, disaster mitigation and environmental conservation as well as the sustainable circular flow of the economy by preserving diverse regional natural environments and using them for infrastructure development

Initiatives:

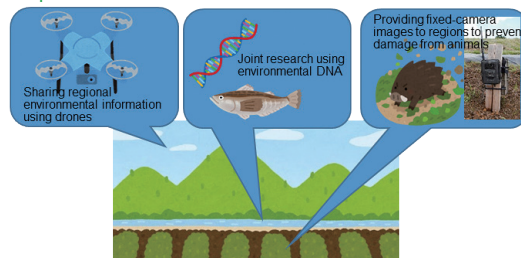

- (i) Promoting ecosystem-based disaster risk reduction (Eco-DRR), making the most of the functions of the environment
- (ii) Advancing regional cooperation to maintain biodiversity
- (iii) Sharing awareness of the importance of conservation and restoration of the natural environment through education

(i) Promotion of Eco-DRR

We do not pursue conservation and improvement of the natural environment for a singular purpose. We consider it to be the interaction of various elements and improve the infrastructure sustainably.

(ii) Introducing technologies that meet present circumstances for regional cooperation

(iii) Promoting conservation and restoration of the natural environment through environmental education

Raising awareness of the importance of biodiversity by creating opportunities for children to play in water
