

Policy for the future:

The TOPPAN Group formulated the “Toppan Group Environmental Vision 2050” in 2021, setting out its long-term approach to global environmental issues as it aims to contribute to a sustainable society that supports all forms of life. TOPPAN enhanced the vision in 2023 and added the theme of preservation of biodiversity. TOPPAN also revised the TOPPAN Group Medium-and-Long-Term Environmental Targets for Fiscal 2030, including new targets for preservation of biodiversity and the optimal use of water. To achieve the Vision and Targets, TOPPAN will address environmental issues across the entire value chain, and work to preserve a rich natural environment that can be passed on to future generations.

< Examples >

(1) Sustainable Raw Material Procurement

- Sustainable paper procurement, thorough paper recycling, green purchasing

(2) Strengthening Biodiversity Conservation Activities

- Maintenance of green spaces and biotopes on site with the help of external experts
- Implementation of biodiversity education (holding events, participating in activities sponsored by environmental NPOs and local governments, etc.)

(3) Pro-biodiversity Products and Services

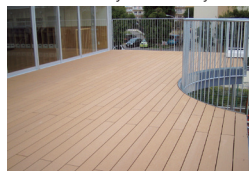

- Sound nurturing of forests: Forest thinning paper products
- Alleviating overuse: Recycled composite décor materials

(4) Participation in Initiatives

- Declaration of support for TNFD recommendations, registering as Early Adopter
- Participation in various organizations and initiatives related to biodiversity

Biotope in the TOPPAN Technical Research Institute,
certified by the Ministry of the Environment (September 2023)

Toppan Material Wood
(Composite building material using
waste wood and waste plastic)

Cartocan
(Paper-based beverage container
made from thinned wood)
