

Policy for the future:

In the Obayashi Group's long-term vision, Obayashi Sustainability Vision 2050, we have set a vision for 2050 as realization of sustainability of "the planet, society, and people." Aiming for integrated improvement in nature, society, and the economy through various factors including preservation of biodiversity and creation of a society that respects the natural world, we are working to establish an environmentally responsible society, as one of our Six ESG Materialities.

Based on the Declaration of Biodiversity by Keidanren, we will work to preserve biodiversity through our business activities in accordance with the Group's Biodiversity Policy established in 2009 prior to the Aichi Targets.

◆ Examples ◆

By creating "green space" where buildings, people and living creatures coexist, we contribute to preservation and creation of local ecosystems, preservation of urban environments and prevention of global warming.

▲ oak omotesando (complex-building in Tokyo): We build connections between living creatures and the city by our greening technology.

◀ Namba Parks (complex-building in Osaka): We contribute to symbiosis with environment and liveliness of the people through large-scale greening of the city.

◆ Message for society ◆

Caring the global environment, we will contribute to the realization of a sustainable society.

◆ Future issues ◆

Developing infrastructure due to national land resilience policy is incompatible with biodiversity. However, we will work to resolve these issues through technological innovation.

◀ Akasaka Intercity AIR (complex building in Tokyo): We recreate the natural scenery of forests and waters of Edo era in the city.
