

Policy for the future:

Biodiversity is critical to the economy and to humanity itself. We at Epson seek to preserve biodiversity across our business activities and to raise awareness of its importance. We understand that our business activities are based on natural capital. Meanwhile, we are committed to community action and to becoming carbon negative and underground resource* free by the year 2050, mitigating impacts on ecosystems, and driving a circular economy without the use of virgin underground resources.

*Non-renewable resources such as oil and metals

Initiatives in Products & Services

● PaperLab dry-process office papermaking system

Epson developed dry fiber technology to enable in-office paper recycling, promoting the effective use of forest resources and realizing the local production of paper for local consumption. In addition to office use, Epson is working with partners in co-creation projects to use PaperLabs to recycle community paper resources locally.

papercirculation for community

Conservation and Restoration Activities

● Partnership to Conserve and Restore the World's Forests

Epson has launched an international partnership with global conservation organization WWF, supporting forest conservation activities and nature recovery efforts implemented by WWF across “Deforestation Fronts” program.

(The three-year international partnership was launched in March 2023)

EPSON

Epson Group Aspirations

A commitment to sustainability is enshrined in Epson's Management Philosophy, and preserving the natural environment is one of our Principles of Corporate Behavior. We aspire to sustainably use natural capital in manufacturing and to exercise care and act responsibly as members of society.
