

Policy for the future:

In order to fulfill our social responsibility of sustainable development based on the Sumitomo Spirit, which focuses on “Mutual Prosperity, Respect for the Public Good”, our group will expand its environmental conservation activities throughout the group, by not only preventing global warming through the reduction of greenhouse gas emissions, but also controlling the expansion of waste landfills through the reduction of waste, thereby securing the habitats of wildlife.

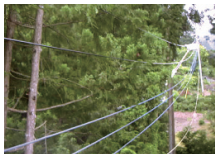

We will contribute to the conservation of biodiversity by developing products and technologies that can contribute to ecosystem protection, and by working together with local communities, as in the following cases.

< Product Example 1 >

Electrical wires that minimize deforestation

Used in the Special Zone where trees cannot be cut.

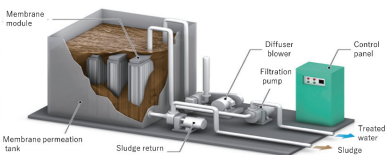

Structure

- Can be laid in contact with trees.
- Protects trees in national parks.
- Offers long-term dielectric strength with the wear-resistant layer, etc.

< Product Example 2 >

Wastewater treatment equipment that cleans water to return it to the nature.

Factory wastewater is treated with this equipment to protect river and marine ecosystems.

< Examples of Regional Activities >

Participation in the Koya Pond Regeneration Promotion Committee (Local activities that we have been committed since 2008.)

We work with local communities to protect and rewild the nature by weeding the surrounding area of Koya Pond in Itami and removing non-native plants..
