Policy for the future:

Based on the Group Mission of Contributing to Society through Healthcare, Terumo believes that its social mission (corporate purpose) is to lead the advancement of healthcare and the enhancement of patients' QOL. To realize the Group Mission, Terumo has identified seven sustainability priorities, and has defined the reduction of environmental impact as one of the foundations to support the creation of social value. Along with “carbon neutrality” and “effective use of resources,” we consider “biodiversity conservation” to be one of the most important issues, and will work to reduce environmental risks to ecosystems and engage in environmental conservation activities in local communities.

<Examples of Specific Efforts>

Realization of carbon neutrality and effective use of resources

Terumo's Green House Gas emission reduction targets was certified by the SBT Initiative in March 2023 as being aligned with the common goal to limit global temperature rise to 1.5°C above pre-industrial levels. We aim to achieve carbon neutrality by 2040 through energy conservation activities, installation of solar panels in our facilities, and other measures to promote the shift to renewable energy sources (Scope 1+2). We are also working to reduce waste, make effective use of resources (Circular Economy), and develop products that are friendly to both people and the environment.

Biodiversity Conservation

Terumo produces pharmaceuticals and medical devices using groundwater from the foot of Mt Fuji. In fiscal 2011, three parties—Shizuoka Prefecture, a local forest owner, and Terumo—entered into an agreement called the Shizuoka Mirai-no-Mori (Future Forest) Supporter Pact and have been planting trees and maintaining the forest. In addition, we hold events to raise recycling awareness and engage in tree-planting activities and other biodiversity preservation initiatives at our overseas sites as well as in Japan.

Installation of solar panels

Recycling waste plastic from factories

Mt. Fuji Reforestation Project

<Message to society>

To protect and nurture forests as a source of groundwater and to conserve biodiversity, we will work in correlation with carbon neutrality and resource recycling efforts.
