

## Policy for the future:

APP group conserves wildlife by mapping populations of three key animal species – Sumatran tiger, Sumatran elephant, and Bornean orangutan – in supplier concession areas with protecting over 600,000 ha of natural forest in Indonesia.

In addition, APP group addresses the land-scape level forest conservation through Belantara foundation by protecting/restoring forest and supporting local community even surrounding the concession.

## Protecting wildlife and its habitat

Based on data from camera traps and direct sightings, APP suppliers area are being used as **habitat** and **corridor** by:

~7%

Of Sumatran elephant population in Sumatra

~10%

Of Sumatran tiger population in Sumatra

~11%

Of Bornean Orangutan population in Kutai National Park landscape

Wildlife protecting patrol for by Belantara and local community
