Policy for the future:

Tokyu Fudosan Holdings Corporation continue to work with design firms, construction companies, customers, local communities and other stakeholders to carry out responsible materials procurement and conduct ecosystem studies at the time of development for our business activities. We also mitigate impacts on biodiversity and conserve biodiversity.

[Biodiversity conservation objectives]

1. We grasp the relation between our operation and biodiversity.
2. We strive to minimize the effect of the operations on biodiversity.
3. We strive for sustainable use of biological resources.

Green Connection Project

This project is an initiative to protect forests together with our customers. Timbers produced from these forests were used in our business and forms a cyclical cycle in which provided to our customers.

OMOHARA FOREST's biological studies

Biodiversity risk assessment Conducting ecosystem studies and conserving biodiversity using greenery in the project

Ecosystem study in progress at Tokyu Plaza Omotesando Harajuku

Seven-spot ladybug

Japanese white-eye

We actively introduces greenery to form ecological networks considerate of biodiversity. We also conduct ecosystem studies on the local environment which helps to conserve the biodiversity of the entire community.
