Policy for the future:

Veolia, as a world leader in Ecological Transformation, strongly believes that we have a great responsibility to address environmental issues. Our Purpose is “to reconcile human progress and environmental protection.” With that in our mind, we accelerate decarbonization, depollution, and resource regeneration, and we are committed in biodiversity initiatives, particularly in two areas: 1. To minimize our environmental footprint and 2. To protect and restore ecosystem and biodiversity.

<Concrete actions> Veolia has publicly committed to KPIs in our new strategic program GreenUp 2027.

Depollution - Biodiversity

1. Zero phytosanitary products

To reduce our environmental footprint, we initiate with external vendors to minimize using chemical pesticides at the green spaces we manage. As of April of 2024, fifteen of our business sites have addressed “zero-phytosanitary” and five have signed the Green Space Charter, developed by Veolia. By 2027, the initiative will be expanded to all targeted business sites.

2. Biodiversity footprint assessment and action plans

Biodiversity footprint assessments based on global standards were conducted by external experts, and action plans were developed and implemented. Three footprint assessments were conducted at our sites by 2023. We will continue and strengthen our measures.

3. Internal educational program

To raise awareness of biodiversity in daily operations, internal e-learning and other activities are continuously organized.
