

## Policy for the future:

The Toyobo Group recognizes that biodiversity is an essential part of a sustainable society. As a group that continues to create the solutions needed by both people and the earth, and with the understanding of the impact our business activities have on biodiversity conservation, we will endeavor to conserve the three types of biodiversity (genetics, species, and ecosystems) through various activities.

- We will work to understand how the Group's business activities affect biodiversity and endeavor to avoid or minimize negative impacts.
- We will strive to give consideration to biodiversity conservation throughout the entire value chain.
- We will contribute to conservation by promoting the development of biodiversity-conscious products and technology.
- We will support and promote conservation activities through social contribution activities, etc.
- We will comply with all national and international agreements on biodiversity.

## < Specific examples of initiatives >

### 1. Connecting business activities and biodiversity Creating a "Risks/Opportunities" map

We have organized and mapped how our business activities related to biodiversity in terms of both risks and opportunities throughout the entire cycle of those activities—from the design and development of products and materials to disposal and recycling.

### 2. Helping with local environmental conservation

Our offices and factories are regularly involved in cleaning up nearby areas to help conserve local ecosystems.

### 3. Ecosystem preservation activities

Our company have forest in Miyazaki Prefecture which has high vegetation naturalness. It's homed to rare fauna and flora, including endangered species like the mountain hawk-eagle. We have named this forest "Aya-no-Mori", working to protect the habitats of rare animals through management to forest sustainability.

## < Goals and initiatives >

We have set medium-, long-term, and short-term goals for biodiversity conservation activities. We have started working on.

## < Message for society >

To achieve our goal of improving the global environment, we will continue to actively support and participate in social and local environmental protection and biodiversity conservation activities.
