## Policy for the future:

Recognizing that protecting the environment is an important managerial theme, The JR-West Group will promote initiatives to reduce CO<sub>2</sub> emission volumes, save energy, engage in appropriate and effective resource usage, and reduce the impact of our business activities on ecosystems.

The JR-West Group will pursue measures to protect the environment and improve the sustainability of our society, and we will continue to support the lives of our customers and fulfill our mission as a social infrastructure business group, helping to achieve our vision for the future.

## 【Examples of specific initiatives】

### Construction considering biodiversity

Creatures living at construction sites are captured before construction and released downstream.

Pollution prevention fences are installed in river works to prevent pollution and water quality deterioration.

### Reduction of environmental impact of maintenance materials

We are replacing vehicle paint and axle rust inhibitors with water-based materials that have a smaller environmental impact than products containing organic solvents.

### Environmental protection education activities

We provide education on environmental protection for elementary, junior high and high school students.
