

Policy for the future:

Toppan positions the conservation of biodiversity as an important element of management. The Group recognizes that biodiversity conservation and the sustainable use of biodiverse resources help mitigate global warming and alleviate other environmental problems.

< Cases >

- A set of Paper Procurement Guidelines for the Sustainable Use of Forest Resources was also formulated in September 2011 to step up specific conservation measures.
- Employees and family members take part in conservation activities organized in site neighborhoods by environmental NPOs and local governments.(since 2011 , 2times/year)

< Future tasks >

- Evaluation of the global warming for the forest resource
- Evaluation of the forest resource for the water resource
- Evaluation of water resources risk at manufacturing sites

< Message for the society >

Do you know the destruction of the forest not to cut a tree?
