

Policy for the future:

We regard sustainability as the most important part of our group strategy, and are promoting management from the perspective of “Care for Earth” under the vision of “coexistence with the environment.”

We make biodiversity conservation an important theme for achieving sustainability, along with global warming and the circular economy.

We are promoting eco-friendly raw material procurement, activities to raise awareness at each business site, and environmental conservation in the region.

< Examples of initiatives >

- 1: Our Fuji branch regenerates a woodland on the site of the factory and fosters nature with the participation of local citizens.
- 2: By planting local indigenous species at each plant and observing nature, we are working to increase the value of green spaces and raise employees' understanding and awareness of biodiversity conservation.

< Future tasks >

The aim is to raise the awareness of all employees so that consideration for biodiversity can be taken for granted in all aspects of business.

< Message for Society >

Our commitment to biodiversity is

“Care for Earth”
