

## Policy for the future:

Aisan Industry has declared, on its Environmental Policy, that it will contribute to the sustainable development of the society and earth through its business activities and will actively promote environmental activities.

Globalization has rapidly progressed recently and we must recognize that it is a key management target to take action with a global viewpoint. Additionally, we must deepen our understanding of biodiversity in order to contribute to the annually improving SDGs results and conduct activities that will enable future generations to benefit from the environment.

### < Our Activities >

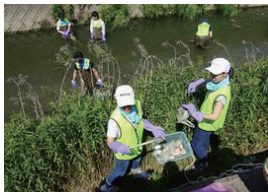

We are working hand in hand with the local community and government to clean and maintain the rivers, lakes, and forests and establish our factory as “a factory where human beings and nature coexists in harmony.”

### < Our results and what we learned >

We became aware that, even at this moment, substances that cause microplastic pollution are flowing into the sea, and of how devastated the forest around our factory is and learned about the problems that affect biodiversity.

In addition to experiencing and learning the joy of interacting with nature, we were thanked by local people. That enabled us to understand how important it is to continue our activities as a corporate citizen.

Honsha plant (Obu city)

Cleaned a river with the local community.(From May,2016)

Toyota plant (Toyota city)

Forest conservation activity in the forest surrounding the plant. (From Dec,2016)

### < Challenges for the future >

- Improving our employees' understanding and awareness of the environment.
- Countermeasures against alien species.
- Deepening the partnership with the local government and community.

### < Our message to the society >

Aisan values human life and nature and will continually strive to realize “a factory where human beings and nature coexists in harmony.”
