

Policy for the future:

The Chubu Electric Power Group will deliver high-quality electricity in a safe, affordable, and stable manner, and provide “new forms of community” through creation of the Community Support Infrastructure, and we will aim to grow sustainably as a total energy service corporate group that is one step ahead.

With aim of realizing these goals, we will practice appropriate environmental management, and each and every one of our employees shall discipline himself and act in a manner that is conducive to the development of an environmentally-conscious sustainable society. Moreover, to protect our rich natural environment, we will take into account ecosystem biodiversity as we conduct our business activities.

Human assets development through the activities, “Chuden Foresters” and “Chuden Interpreters”

In the company-owned “Uchigatani Forest” and in other places, for Chubu Electric Power and Group company’s employees and retirees we foster “Chuden Foresters”, forest volunteers who have tree thinning skill, and also “Chuden Interpreters” who convey the importance of protecting the natural environment.

“Chuden Foresters” and “Chuden Interpreters” conduct activities as instructors and guides to teach “forest work experience” and “forest experience”. As members of the Nonprofit Organization, “People who love water and greenery” they act as volunteers for “thinning practice in man-made forest” mainly in the Chubu region. Through these activities, they deliver the importance of protecting natural environment and biodiversity.

Since 2006, in the first batch of the initiatives we have ever developed 290 members of “Chuden Foresters” and 156 of “Chuden Interpreters” in total.

By cultivating forests and people, we aim for a society that coexists with nature.
