Policy for the future:

Terumo has two factories in the city of Shizuoka and Yamanashi that surrounding Mt. Fuji. Both take in groundwater from springs at the foot of Mt. Fuji for use in the production of medical devices, pharmaceuticals, and other products. Recognizing that our business depends on the use of natural resources, we are working to preserve biodiversity through environmental education and forestation activities. We have launched “Terumo Mt. Fuji Reforestation Project” in 2003 with the aim to protect and grow the forest that is the source of groundwater. The total number of participants is 2,300, and 3,000 trees have been planted. In line with the United Nations SDGs’ social issues, we will continue to work with our associates, their families, and local stakeholders to create forests that store abundant water sources and have high CO₂ absorption and biodiversity, and we aim to realize a society that lives with nature.

Initiative example (As of February 2020) Since 2003 —

In fiscal 2011, three parties — Shizuoka Prefecture, a local forest owner, and Terumo — entered into an agreement called the Shizuoka Mirai-no-Mori (Future Forest) Supporter Pact. we are engaged in year-round reforestation activities based on the concepts of resources, living organisms, interaction, and health through this agreement.

We painted our SDGs
