

## Policy for the future:

Founded 110 years ago, Kodensha is a technology-focused group that constantly anticipates the needs of society while working to establish its position in the market as a total engineering company. This is achieved through business activities in four fields: 1) power transmission, contributing to the stable supply of electric power; 2) social infrastructure, supporting the foundations of society; 3) interior renovation, for the design and implementation of new constructions, refurbishments, energy conservation enhancements and ZEB for power supply and distribution, lighting, communications and disaster prevention in office buildings, factories, hospitals and schools, etc; 4) sales, contributing to society as a technology company through proposals and sales of FA equipment, heating and cooling equipment, and elevators.

Based on our strong sense of ethics and our spirit of compliance with the law, we seek to realize our corporate philosophy – “Contributing to the realization of a prosperous society through the joy of creation.” By conducting our business activities on this basis, we will fulfill our corporate social responsibility (CSR), looking towards the achievement of the SDGs.

### < Examples of initiatives >

#### ■ Design and implementation technologies

- Proposals for the design and implementation of environmental and energy-saving equipment
- Proposals for energy-saving equipment as a ZEB planner
- Proposals for design and implementation in relation to BCP measures
- Formulation of construction plans that consider the global environment

#### ■ Environmental activities

- Maintenance and improvement of environmental activities (ISO1400)
- Promotion of reduction of environmental burden through construction activities

#### ■ Contribution to local communities

- Clean-up activities around our Headquarters
- Community contribution activities at construction sites
- Support for wheelchair basketball

### < Goal >

To contribute to design and implementation technologies utilizing AI and ICT technologies which will continue to develop into the future

### < Our message to society >

Our company takes ESG (Environment, Society, and Governance) initiatives very seriously. Looking towards the realization of the SDGs, we will fulfill our corporate social responsibility into the next century via the provision of a comprehensive service in the four fields of our business activities – Interior renovation, power transmission, social infrastructure and sales.
