

# The Life Insurance Association of Japan

<https://www.seiho.or.jp/english/>

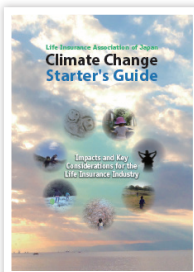

## Policy for the future:

Climate change is inseparably linked to biodiversity, as the changes in environment due to global warming would have negative impacts on biological system. The LIAJ will make efforts on biodiversity conservation mainly through:

1. Sharing intelligences with life insurance companies on climate change
2. Reduction of greenhouse gas emission, by setting environmental conservation target, making industry-wide efforts for reduction of electricity consumption and efficient use of electricity.

## 1. Actions to address climate change

The LIAJ published a starter's guide for addressing climate change.

### Contents:

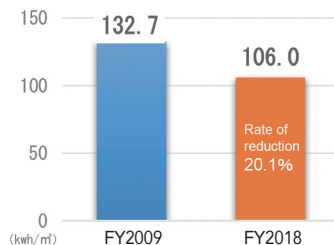

- I Why is climate change important today?
- II What are the impacts of climate change in each business sector?
- III What are the impacts of climate change on the life insurance industry?
- IV What is the global community thinking and doing?
- V Understanding the TCFD Recommendations
- VI Examples of TCFD-type disclosures
- VII Essential points for life insurance companies to consider based on the TCFD

The LIAJ will continue to share intelligences with life insurance companies on climate change.

## 2. Efforts on reduction of greenhouse gas emission

The LIAJ has been trying every year to reduce electricity consumption per floor area.

Electricity consumption per floor area

### Target for the year 2030

The target from FY2020 to FY2030 is to reduce of the entire company (its headquarters, branches, sales offices and etc.) to below the target level for FY2020, which was to reduce it by an average of 1% per year compared to FY2009.
