

Policy for the future:

Veolia strongly believes that we play an important role to reduce environmental impacts as a world leader in the Ecological Transformation. Our Purpose is “to contribute to human progress by firmly committing to the SDGs set by the UN to achieve a better and more sustainable future for all.” With that in our mind, we are committed to minimize our environmental footprint and protect and restore ecosystem and biodiversity.

< Corporate activities > Veolia has publicly committed to KPIs in our strategic program IMPACT 2023.

Protection of environments and biodiversity

1. Zero phytosanitary products

To reduce our environmental footprint, we initiate and coordinate with external vendors to minimize using chemical pesticides at the green spaces we manage. As of June 2021, two of our business sites have signed the Green Space Charter, developed by Veolia, and many more to be signed throughout Japan.

2. Biodiversity diagnosis and action plans

We regularly carry out diagnosis and set up action plans to take appropriate measures toward biodiversity protection. One diagnosis was conducted at a site of Chiba Prefecture in 2016, and another one is scheduled to be conducted in 2021.

3. Internal educational program

We spend time on raising our employees awareness on biodiversity issues. The internal e-learning was developed in 2018, and the company-wide campaign and workshops were organized in 2021 to think how to protect biodiversity in our daily operations.
