Policy for the future:

Toyota Industries Corporation Group has set “Generate positive influence on biodiversity” as one of the pillars of “Environmental Vision 2050” and is constantly aware of its impact on the natural environment as it carries out various business activities. In the Environmental Action Plan, our medium-term action plan, we are promoting activities that contribute to the preservation of local biodiversity by utilizing the characteristics of each site.

< Specific examples of initiatives >

Biotope Connecting People, Nature, and the Community

Children releasing fish into a biotope stream.

The biotope is located near the Obu Plant, and under the concept of “a sample garden of local nature,” the biotope creates a connection with the surrounding green space and waterfront, creating an environment that can attract a variety of living creatures.

The biotope is also open to the local community and has become a place for relaxation.

Creating an Animal Path to Expand habitats Natural Habitats of Living Organisms

Foxes using an animal path.

In recent years, foxes have been observed living in the area around the Higashiura Plant, and at the same time, foxes have been killed in traffic accidents. Therefore, an animal path was constructed within the plant premises so that foxes can come and go in peace. In addition to foxes, raccoon dogs and hares also use the animal path.
