

Policy for the future:

We are supported by the natural blessings of the natural cycle of biodiversity. To realize a sustainable society, DENSO has formulated “DENSO ECO VISION” as an action plan. For natural symbiosis, we promote “Protection of local ecosystems/rare organisms”, and also “DENSO Green Project” with cooperation of associates, their families, NPOs, and local communities.

Protection of unique local ecosystems and rare species

In order to preserve ecosystems unique to each region, we develop the activities according to the characteristics of the region at our plants in Japan and overseas.

Biotope
DENSO (JAPAN)

Eco-garden
DMUK (UK)

Wildflower Garden
DMMI (USA)

DENSO Green Project

The Green Project has continued activities to create forests where people and nature can coexist in harmony since 2006 under the theme of biodiversity, with the introduction of associate leader system.

Nature observation

Tree thinning experience

Number of activities	56 (until June , 2020)
Number of participants	8,439
Number of trees planted	22,812

Creating offices/factories surrounded by greenery
