

Policy for the future:

The NGK Group will contribute to the realization of society's direction toward "carbon neutrality," "a recycling-oriented society," and "harmony with nature" through its business activities. We view the challenge of protecting biodiversity as an integral part of achieving a sustainable society. We also have been pushing forward with activities pursuant to the Aichi Targets (international goals for biodiversity) agreed upon at COP 10.

Ex.1 Biodiversity Survey

At an NGK employee welfare facility located on the outskirts of Nagoya City, we carry out periodic summer and winter surveys of birds, plants, and insects. Among the diversity of wildlife confirmed, no alien species that require urgent action has been found, meaning that biodiversity is being adequately maintained.

Ex.2 Employee Volunteering

Preservation of Asian skunk cabbage colonies in Hokkaido

Beach cleanup in Ishikawa

Mangrove-planting in Malaysia

NGK bases work with local governments and NPOs in community service, and this includes contributing to the preservation of biodiversity.

Ex.3 Science Site for youth

<https://site.ngk.co.jp/>

NGK character "KUROKO" introduces scientific wonders. The site (Japanese only) also provides biodiversity contents.

Future Challenges

✓add activities

✓integrate the post Aichi Targets

Message

Envisioning SDGs from 100 years ago. NGK will continue to addressing global biodiversity issues to help realize sustainable societies.
