

## Policy for the future:

In its Medium-Term Management Plan, the Okabe Group focuses on addressing the Sustainable Development Goals (SDGs) through management, including decarbonization initiatives, based on its vision of becoming “a global manufacturer that will contribute to resolving global issues by providing comprehensive solutions.” The Group will proactively pursue initiatives to reduce the environmental impact of its business activities, aiming to become carbon neutral in the future through actions such as contributing to zero emissions from construction sites and increasing the absorption of CO<sub>2</sub> in the marine business, in addition to reducing GHG emissions.

### ●Sustaining marine resources

By providing these three products below, Okabe’s marine business is contributing to the creation of a sustainable cycle for the ocean by increasing ocean life and seaweed while passing ocean resources to the next generation.

The first, “**seaweed bed banks**,” artificially restore seaweed beds, providing a spawning ground for fish.

The fish born in the seaweed beds use the second “**proliferation banks**” as a shelter and where they can mature.

The third “**fish reefs and floating fish banks**” will gather the fish that have matured, helping the fishing industry achieve greater efficiency.

In this way, we our products support marine life from spawning to fish growth and human catch, we are contributing to the creation of a sustainable and abundant ocean.

①Seaweed bed banks

A spawning ground for fish

②Proliferation banks

Help the fish to mature

③Fish reefs and floating fish banks

Gather fish and help fisheries

### ●Future issues

The loss of seaweed beds due to rocky shore denudation around the world has resulted in the loss of blue carbon ecosystems, decreasing marine resources living in seaweed beds and producing other impacts on marine ecosystems.

We will work to restore seaweed in coastal areas using our seaweed bed banks so that the marine ecosystem, which provides various benefits to humankind, can be sustainable.

### ●Message for society

Okabe Group will create a sustainable cycle for the ocean and realize “**Marine Triple-Win**”.
