

Policy for the future:

The Mitsubishi Research Institute Group has established an environmental policy and aims to be a leading company in building an environmentally harmonious economy and society by contributing to the reduction of the burden on the global environment and the sustainable development of society through its business activities.

Biodiversity and natural capital initiatives have a high affinity with decarbonization and carbon neutrality initiatives, and it is necessary to consider how best to balance these efforts. Mitsubishi Research Institute regards this as an important sustainability theme. We will strive to disseminate accurate and easy-to-understand information and make further contributions to the realization of a sustainable society by establishing a framework for the disclosure of financial information related to nature.

Environmental Policy

The Mitsubishi Research Institute Group contributes through knowledge to building a sustainable society, as it complies with relevant laws and regulations and strives for continual improvements through the efforts of all its employees.

1. Advancing Sustainable Environmental Management

Our activities to reduce energy consumption, paper consumption, and waste generation contribute to conserving the global environment while also reducing unnecessary expenses.

2. Undertaking a Variety of Environmental Businesses

We contribute to conserving the global environment by expanding our product, service lineups, and businesses that contribute to the creation of a sustainable society.

3. Contributing to Environment & Society by Providing Knowledge

We leverage our integrated strengths as a think tank to make leading environmental conservation recommendations as well as to undertake activities that contribute to the environment.

<Activities: Support for customers dealing with TNFD>

Mitsubishi Research Institute is supporting its clients in responding to the TNFD in an optimal and efficient manner based on their situations, leveraging its experience in managing the TCFD consortium secretariat, its many years of research and study in the biodiversity and climate change field, and its track record in supporting companies in developing management strategies. Through these efforts, we support our customers to promote nature positive corporate activities and management.
