

Policy for the future:

Based on its corporate philosophy and sustainability policy, Nippon Chemical Industry group will promote business activities that take biodiversity into consideration. Throughout the value chain, we will ascertain the impact of our group's business activities on biodiversity and continuously strive to minimize this impact. We will strive to raise each employee's awareness of biodiversity through responsible care activities. In addition, we will continue social contribution activities that contribute to biodiversity conservation to earn the high marks of society and local residents. We will actively disclose the above initiatives and deepen communication with our stakeholders.

< Specific examples of initiatives >

1. Regional environmental conservation activities

Head office and each factory: To conserve the ecosystem in the neighborhood, we regularly participate in clean-up activities in the neighborhood.

2. Forest conservation activities

Tokuyama factory: We participates in forest conservation activities "Town, forest and water exchange event (Shunan-shi, Yamaguchi)", where it learns about forest's water source cultivation function and global warming prevention function.

< Message to society >

In order to maintain an environment in which all living things on earth coexist in harmony with humans, we will plan and promote biodiversity conservation activities in concert with local communities.

Fukushima No.2 factory "Cleanup activities at Sakura village"

Aichi factory "Cleanup activities at waterfront"

Tokuyama factory "Town, forest and water exchange event"
